*Domestic Violence and Nonfatal Strangulation Assessment* is designed to standardize anatomic nomenclature as it relates to the head and neck for both new and experienced sexual assault nurse examiners and sexual assault forensic examiners. This assessment will also prove beneficial for first responders, medical residents and physicians, nursing students, and nurse practitioners, including midwives, women's health nurse practitioners, pediatric nurse practitioners, and forensic nurse practitioners.

Each case study provides a clear history, photographic representation, and confirmation of anatomic landmarks and injuries, along with discussions about existing conditions and their influence, identification of injury, evidence-based collection techniques, and treatment based on current standards of practice. Chapters also include best practice recommendations and other tools to support evaluation and documentation. This workbook will help fulfill health care providers' need for basic, peer-reviewed information and will contribute to continuing competence in care for strangulation patients.
